Umang Pawar

AI/GenAI Engineer (Fresher) | LLMs, RAG, Multi-Agent Systems & MCP
Nagpur, India | Phone: +91 8055070449 | Email: umangpawar629@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

AI/GenAI Engineer who builds and deploys RAG systems, guardrailed retrieval, and multi-agent LLM workflows. Built an access-controlled HR RAG chatbot for 100+ employees at LanceSoft, validated at 90% accuracy on a 50-question evaluation set. Proficient in Python, FastAPI, LangChain, Qdrant, ChromaDB, and pgvector.

SKILLS

AI / GenAI: Retrieval-Augmented Generation (RAG), LangChain, Agentic and Multi-Agent Workflows, Model Context Protocol (MCP), LoRA Fine-tuning, Prompt Engineering, Reranking, Guardrails, LLM Evaluation, Function/Tool Calling
LLMs / Vector DBs: GPT-OSS, Llama 3, OpenAI API (GPT), Gemini API, Groq, Qdrant, ChromaDB, pgvector
Languages / Backend: Python, SQL, FastAPI, Flask, REST APIs, SQLAlchemy, ABAC (Attribute-Based Access Control)
Data / Infra: PostgreSQL, Redis, Pandas, Power BI, Excel, Git, GitHub Actions (CI/CD), Docker, Railway, Render

PROFESSIONAL EXPERIENCE

AI Engineer Intern | LanceSoft | 07/2026 - 09/2026

- Built **HR-PolicyIQ**, a RAG chatbot (LangChain, Qdrant, Groq Llama 3, FastAPI, PostgreSQL, Redis) over **30+ documents (~4,000 chunks)**, including company HR policies, deployed to **100+ employees**.
- Validated answer quality against source documents on a **50-question** evaluation set: **90%** fully correct with relevant citations; fixed the 5 partially accurate responses through prompt engineering (system prompt revision).
- Implemented ABAC retrieval for **3 roles** (manager, HR, employee) across Hyderabad and Bangalore; validated with **20+ edge-case** unauthorized-access tests, identified content leaks, and fixed them.
- Added a confidence-scored reranker and source-cited answers as grounding guardrails against hallucination; built a logging layer for observability to trace where the system fails (query and API-key errors), and documented the system design and workflows.
- Benchmarked local Llama 3 (PyTorch) against Groq-hosted Llama 3 and migrated to Groq for production reliability; cut average response latency from 5-6s to 1-1.5s (**~4x faster**) via embedding caching and pipeline optimization.
- Surfaced qualified leads for managers and HR by matching **3,000+ candidate records** to job descriptions and resumes using pgvector and contact retrieval.

Data Analyst Intern | CarrierDomain | 03/2026 - 06/2026

- Built automated Python/Pandas/SQL ETL pipelines processing **637,494+ client records** from multiple source tables into ML-ready datasets.
- Built Power BI and Excel dashboards that refresh from the pipeline for weekly KPI and segmentation reporting.

Software Developer Intern | Syncsas Technologies | 11/2025 - 03/2026

- Shipped **3 client-facing** full-stack features (Python, Flask, PostgreSQL), including an AI chatbot (LangChain + OpenAI API), with testing.
- Set up GitHub Actions CI/CD pipelines, cutting manual deployment steps by **60%**.

PROJECTS

Atlas-AI: AI Career Platform | 2026

Python, FastAPI, Groq, LangChain, JSearch | Live Demo | GitHub

- Built **4 integrated AI systems** in one deployed product: a JSearch job scraper (8-10 jobs per run), an ATS analyzer (match score, missing keywords and skills, improvement suggestions), a voice mock-interview engine with LLM follow-ups, and a RAG career chatbot.
- Built a multi-agent workflow (interview, follow-up, and performance-feedback agents) using MCP tools for job search and ATS resume scoring.
- Fine-tuned Llama 3 with LoRA on a public Kaggle dataset, served for interview follow-ups; integrated Groq-hosted GPT-OSS 20B for context-aware follow-up questions.
- Cut response latency from 4-5s to ~2s (**~2x faster**).

FinSight: AI Financial Intelligence Platform | 2026

Python, FastAPI, LangChain, ChromaDB, Groq (Llama 3), React, Railway | Live Demo | GitHub

- Built a full-stack financial RAG platform (FastAPI, LangChain, ChromaDB, HuggingFace embeddings, Groq Llama 3, React) for SEC 10-K analysis with cited sources in under 2s; **500+ chunks** indexed.
- Added fast, standard, and deep-research modes (Llama 3 8B/70B) with charts, PDF report export, and live market data (Alpha Vantage).
- Validated on a **30-question** test set checked manually against source reports: **20+ answered correctly**; improved quality by fixing chunking and tuning retrieval. Deployed on Railway, resolving Pydantic and CORS issues.

Closira: AI Customer Support Workflow | 2026

Python, Groq API, Llama 3.3 | GitHub

- Built a **4-stage** LLM agentic workflow for SOP-grounded FAQ answering, lead qualification, escalation, and session summarization, with a two-layer escalation check (keyword pre-check plus model-generated tags).

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering | G. H. Raisoni University, Nagpur | 2026
CGPA: 7.50/10

CERTIFICATIONS

Google AI Professional Certificate (2026)
