SUMMARY

GenAI Engineer who architects and ships production LLM systems end to end. At LanceSoft, built and owned an ABAC (Attribute-Based Access Control) secured RAG chatbot that reached 100+ employees and was later sold as a client facing product, plus a Lead Generation Engine adopted org wide by a CTO, managers, and HR for live B2B outreach. Works across the full GenAI stack, RAG pipelines, LangChain based agentic workflows, LoRA fine-tuning, and vision language model integration, on a FastAPI, PostgreSQL, and Redis foundation. Published ML researcher, IJRASET 2025.

SKILLS

AI / ML / GenAI: Machine Learning, Generative AI, Retrieval-Augmented Generation (RAG), LangChain, Agentic Workflows, Fine-tuning (LoRA), Vision-Language Models, Prompt Engineering

Programming Languages: Python, JavaScript, TypeScript, SQL

LLMs / NLP: LLM APIs (Groq, OpenAI), Natural Language Processing (NLP), Function/Tool Calling, Structured Outputs, Vector Databases (Qdrant, ChromaDB, FAISS, pgvector)

Backend / APIs: FastAPI, Flask, Node.js, REST APIs, SQLAlchemy, ABAC Security

Databases: PostgreSQL, MongoDB, MySQL, Redis

Cloud / DevOps: Git, GitHub Actions (CI/CD), Docker, AWS, Azure, Railway, Render

Frontend: React.js, Vite, Tailwind CSS

PROFESSIONAL EXPERIENCE

AI Engineer Intern | *LanceSoft*

Jul 2026 - Sep 2026

- Architected an ABAC secured RAG chatbot (HR-PolicyIQ) using LangChain, Qdrant, and Groq (Llama 3) on FastAPI, PostgreSQL, and Redis; deployed to 100+ employees, later sold as a client facing product.
- Reduced hallucinated responses with a confidence scored reranker and source grounded retrieval; cut response latency from 5-6s to 1-1.5s via embedding caching and pipeline optimization.
- Designed a multi-stage Lead Generation Engine (job description processing, contact retrieval, pgvector candidate matching); adopted org wide by the CTO, managers, and HR for live B2B outreach.
- Evaluated a local Llama 3 model (PyTorch) against the Groq hosted Llama 3 API, then migrated to Groq to meet production latency and reliability requirements.

Data Analyst Intern | *CarrierDomain*

Mar 2026 - Jun 2026

- Built automated ETL pipelines (Python, Pandas, SQL) processing 637,494+ client records into ML ready datasets, and designed an Enrollment Performance Dashboard with KPI reporting and segmentation for weekly stakeholder decisions.

Software Developer Intern | *Syncsas Technologies*

Nov 2025 - Mar 2026

- Shipped 3 client facing full stack features (Python, Flask, PostgreSQL) end to end across Agile sprints, from requirements through deployment.
- Implemented CI/CD pipelines via GitHub Actions, cutting manual deployment steps by 60%.

PROJECTS

Atlas-AI: AI Career Platform | 2026 | [Live Demo](#) | [GitHub](#)

- Built four integrated AI systems, a JSearch job scraper, an ATS resume scorer, an LLM voice mock interview engine with dynamic follow ups, and a RAG career chatbot, unified into one deployed product.
- Fine-tuned a Llama 3 model using LoRA and integrated a Llama 3 vision-language model (via Groq) for context aware interview follow ups; cut response latency from 3-4s to 1-2s.

FinSight: AI Financial Intelligence Platform | 2026 | [Live Demo](#)

- Built a RAG pipeline (Groq, LangChain, FAISS) answering questions on financial reports with cited sources in under 2 seconds; owned the Railway deployment, resolving dependency issues (Pydantic, model versioning, CORS).

Closira: AI Customer Support Workflow | 2026 | [GitHub](#)

- Built a 4-stage LLM agentic pipeline (Python, Groq API, Llama 3.3) for SOP grounded FAQ answering, lead qualification, and session summarization, with a two layer evaluation (keyword pre-check plus model tags) to measure escalation accuracy.

EDUCATION

B.Tech, Computer Science & Engineering, G.H. Rasoni University, Nagpur | 2026

CERTIFICATIONS

Google AI Professional Certificate (2026) | Google AI Essentials Certificate (2026) | Research Publication: IJRASET (2025)
